Are you ready for MR8?

Check the following lists of hardware and software against your current system to see what you need to add MR8 to your business.

If you subscribe to MR8 Subscribe, you will need a server (or main computer for smaller offices), where your MR Server software and database reside, and workstations with access either directly or remotely to your server.

If you subscribe to MR8 Cloud, you only need enough workstations to access your MR system which is hosted in the cloud, eliminating the need for your own server.

Please note: MR8 is a software solution only. You are responsible for installing and maintaining any hardware and third-party software required to operate MR8.

Maintenance that is your responsibility includes:

- Configuring your firewall, including opening ports as required by OMTI Support for your MR system to operate. We are not able to open ports in clients' systems. Port requirements must be done by client. *(This is for MR8 Subscribe only. MR8 Cloud does not require open ports.)*
- Resolving network issues.
- Setting printer.
- Installing IIS.
- Making your logo image for branding your MR documents, website, etc.
- Keeping all required software and hardware to current specs set by OMTI Support.

For MR Subscribe, you need a powerful server

The server or main computer on which your MR Server (software and database) resides and to which your workstations can connect, is the heart of your MR system. If you will be running other applications or storing data on this machine, be sure to add those requirements to your calculations for the amount of capacity and power your server/main computer needs. You will also need storage space for data and file repositories. *(MR8 Subscribe only. MR8 Cloud provides a cloud-based server and file repository.)*

SERVER/MAIN COMPUTER

Components	Recommended
Processor (CPU)[1]	3 GHz or faster
Memory (RAM)	4 GB
Hard Disk Space[2]	100 GB
Monitor	VGA with 1024 x 768 resolution or higher
Operating System	Windows 2008/2012 Server, Windows Vista or higher
Database	SQL Server 2008 Express Edition SP2[3] or SQL Server 2005 SP4, 2008 SP2 or 2008 R2 SP1[4]
Internet Access[5]	Required
Other Software	.NET Framework 3.5 SP1 or higher, Windows Installer 4.5 or higher

1. *We highly recommend Intel® processors. Non-Intel processors (such as processors labeled Intel compatible, AMD, etc.) have many known issues with running SQL Server. Since we cannot resolve these issues, only Intel processors are recommended.*

2. *This space does NOT include data storage or file depository storage space.*

3. *MSDE 2000 has been replaced with SQL Server 2008 Express Edition. It is your responsibility to download, install and maintain it. As a courtesy and a service, OMTI will install it for you, but you must contact Microsoft for support. We do not support any third-party software.*

   SQL Server 2008 Express Edition has limitations. You are limited to only one processor with 1 GB RAM, and total data size cannot exceed 4 GB. When your data reaches this limit, you must purchase SQL Server 2008 Standard Edition or higher.

4. *SQL Server 2000 is NO LONGER SUPPORTED and will not be compatible with MR8.*

5. *You cannot update our software without Internet access.*

Are you ready for MR8? — continued

Whether you use MR8 Subscribe or MR8 Cloud, set up as many workstations as you need wherever you need them

Workstations can be desktop PCs or laptops. You can connect them to your server either directly (if you have MR8 Subscribe) or remotely (with MR8 Subscribe or MR8 Cloud), so you don't have to be tied to a physical location to work with

MR8. You can have an unlimited number of workstations connected to your server; however the maximum number of workstations that can access your MR Server at the same time is determined by how many user licenses you have.

WORKSTATIONS

Components	Recommended
Processor (CPU)	2 GHz or faster
Memory (RAM)[1]	2 GB
Hard Disk Space	500 MB
Monitor	VGA with 1024 x 768 resolution or higher[2]
Operating System	Windows Vista or higher[3]
Internet Access	Required
Other Software	Adobe Reader/Acrobat 7 or higher, .NET Framework 3.5 SP1 or higher

1. *Minimum RAM requirements are for MR8 only.* **If you run other applications at the same time as MR8, you will encounter memory problems unless you have enough RAM to allot to all open applications.**

2. *You cannot utilize our software without meeting the minimum resolution requirement listed here.*

3. *MR8 Subscribe and MR8 Cloud can also run on Windows XP, although we do not recommend it due to its vulnerability to security risks and viruses.*

User Licenses

You need one user license for each user who accesses your MR Server (where your MR database resides) at the same time. For example, if you have two people processing orders, a Billing person, a Production person and yourself all using MR at the same time, you need five user licenses.

You do not need extra user licenses for duplicate installations. For example, if you want to install MR on both your desktop computer and your laptop because you want to be able to sometimes work remotely, you only need one user license to cover both computers because only one of them will access your MR Server at a time.

You do not need user licenses for anyone using MR Web, such as attorneys and paralegals, to access their info in your MR database. If however you have employees working remotely with your MR database, i.e., they log into your MR directly, you need to include them in your user licenses.

You can add or cancel user licenses at any time.

Any questions?

If you have any questions about your readiness for MR8, contact MR Sales.
